

FOR IMMEDIATE RELEASE

Cert Center Canada Partners with ITPS to Deliver Capstone Flight Test Experience for Emerging Aerospace Professionals

Montréal, QC – 7th February 2025 – **Cert Center Canada (3C)** is proud to have recently hosted the **capstone flight test exercise** for the 2024B fixed-wing students of the **International Test Pilots School (ITPS Canada)**. The final evaluation took place at 3C's facilities in Montréal and marks the culmination of months of intensive, hands-on flight test training.

The collaboration between 3C and ITPS is a critical component of ITPS's rigorous training program, designed to immerse students in **real-world flight test environments** and prepare them for the technical and operational demands of modern flight testing.

“It was a pleasure to work with such dedicated students and to witness first-hand the professionalism and discipline ITPS instills in the next generation of flight test professionals,” said **Dr. John Maris**, President of Cert Center Canada. “These kinds of collaborations ensure the future of safe, effective aerospace development is in good hands.”

Over the course of the capstone exercise, ITPS students engaged in realistic, high-fidelity flight test scenarios—supported by 3C's experienced team of test pilots, flight test engineers, and certification specialists. The program also exposed students to the operational practices of a working flight test and certification organization, helping bridge the gap between **training and industry application**.

ITPS instructors noted the strong performance of the 2024B cohort and will now begin assessing final reports that reflect both technical insight and applied test discipline.

This partnership reinforces Cert Center Canada's commitment to **aerospace education, industry collaboration**, and the **advancement of flight test excellence** worldwide.

About Cert Center Canada

Cert Center Canada (3C) is an independent Canadian flight test and certification company based in Montréal, Québec. Known for its deep expertise in flight test execution, regulatory compliance, and aerospace R&D, 3C also plays an active role in mentoring and developing future aerospace professionals through partnerships with leading training institutions.

About ITPS Canada

The International Test Pilots School (ITPS) is one of the world's foremost providers of flight test training, offering courses for test pilots and flight test engineers in both fixed-wing and rotary-wing disciplines. Located in London, Ontario, ITPS Canada has trained flight test professionals from over 25 countries
